### GUIDE TO PET CARE POST-PET PRESERVATION

Your pet has completed the preservation process and is ready to go home with you. There are a few steps you can take to ensure that the quality of your pet remains the same as when he or she left Mac's Taxidermy & Friends Forever. They include:

1. Keep your pet away from high humidity locations and away from water. Moisture will introduce the possibility of mold developing on the pet. If liquids are spilled on the pet, immediately blot area with a towel.
2. Should you desire to clean your pet, it is recommended that you use a dry, clean towel. **Do not use** any type of product that will leave a residue on your pet. This could diminish the natural sheen of your pet's coat. We do offer a cleaning product, Mount Shield, which we recommend for all animals preserved by Mac's Taxidermy & Friends Forever. Mount should be applied by spraying a light mist (only 3 or 4 pumps) to your pet once every couple months. Let dry before brushing.
3. Do not attempt to bend or alter your pet's extremities (i.e. ears, forearms, head, etc). These actions could cause permanent damage to the pet.
4. It is ok to brush your pet's hair with a soft-bristle brush. If your pet's hair should become tangled, work out the tangle with your fingers. Excessive force used while brushing your pet's hair may cause it to fall out.
5. If you wish to fluff your pet's hair, use a blow dryer set on **no heat**. Hold the blow dryer at least three inches away from your pet's body.
6. Do not place your pet permanently in direct sunlight. Direct sunlight, over time, can cause fading of your pet's fur.

In the event that there are problems with your pet not mentioned above, please contact Mac's Taxidermy & Friends Forever as soon as you notice the problem. Thank you for choosing Mac's Taxidermy & Friends Forever for your pet.
